School Breakfast Scorecard: 2012-2013 School Year

Acknowledgements

The Food Research and Action Center gratefully acknowledges major support of its work to expand and improve the School Breakfast Program in 2012–2013 from the following:

ConAgra Foods Foundation
Kellogg's Corporate Citizenship Fund
National Dairy Council/Dairy Management, Inc.
Newman's Own Foundation
Walmart Foundation

Additional support for our breakfast work in 2012–2013 has been provided by the following:

California Endowment
General Mills Foundation
Hillshire Brands
Kraft Foods Group Foundation
Robert Wood Johnson Foundation

This research was funded by the supporters listed above. We thank them for their support but acknowledge that the findings and conclusions presented in this report are those of the author alone, and do not necessarily reflect the opinions of our supporters.

About FRAC

The Food Research and Action Center (FRAC) is the leading national organization working for more effective public and private policies to eradicate domestic hunger and undernutrition. For more information about FRAC, or to sign up for FRAC's Weekly News Digest, go to: www.frac.org. For information about the School Breakfast Program, go to: <http://bit.ly/sbprogram>

This report was prepared by Jessie Hewins and Mike Burke.

Executive Summary

For millions of low-income children across the country, the School Breakfast Program provides the opportunity to start the school day with a healthy meal, the health and educational benefits of which cannot be overstated. Children who eat breakfast at school start the day ready to learn—reflected in higher test scores and better classroom behavior—and have improved dietary intakes and reduced levels of food insecurity. In the 2012-2013 school year, participation in the School Breakfast Program continued to grow both in the number of low-income children participating in breakfast and the share of low-income children participating in school breakfast compared to those participating in school lunch. Since the recession, participation in the school meals programs has steadily increased, however the pace of growth has been greater in the School Breakfast Program; the result of extensive efforts by the U.S. Department of Agriculture, state agencies, school districts, and advocates.

Ensuring that more children—especially low-income children—eat a healthy breakfast each day can have dramatic effects on learning outcomes and the educational environment in schools, leading many states and school districts to take steps to ensure that more children are able to participate. Making breakfast a part of the school day by allowing children to eat breakfast in the classroom at the start of school day has proven to be the most effective strategy for increasing participation in the School Breakfast Program. Expanding opportunities to offer breakfast free of charge to all students has also produced strong gains in many states. In particular, the new Community Eligibility Provision—available in seven states in the 2012-2013 school year, and nationwide in the 2014-2015 school year—allows high-poverty schools to offer breakfast and lunch free to all children and presents an enormous opportunity for growth in the program. As more and more schools and district across the country have implemented these strategies, participation especially among low-income children has continued to grow.

This report analyzes school breakfast participation among low-income children nationally and in each state and the District of Columbia for the 2012-2013 school year and discusses effective federal, state, and local strategies for increasing participation in the program. While states have continued to make strides this school year, there is still much progress to be made in order to meet the urgent need.

Key Findings for School Year 2012-2013:

- This year, 10.8 million low-income children participated in school breakfast on an average day, an increase of nearly 311,000 from the previous school year.
- Nationally, 51.9 low-income children participated in school breakfast for every 100 that participated in school lunch, up from 50.4:100 in the 2011-2012 school year.
- Nine states—Arizona, Colorado, Hawaii, Illinois, Kentucky, Maryland, Nevada, New Jersey, West Virginia—and the District of Columbia, produced more than five percent increases over the previous school year.
- The percentage of schools participating in the National School Lunch Program that also participate in the School Breakfast Program slightly increased to 89.8 percent, up from 88.9 percent in the previous school year.
- Widespread implementation of breakfast in the classroom—where students eat breakfast in their classroom at the start of the school day—continued to drive participation in top performing District of Columbia and New Mexico. Both jurisdictions have implemented legislation requiring high-poverty schools to offer breakfast after the bell, either through delivering breakfast to the classroom or offering meals from grab and go carts in the hallway.
- The seven states that had implemented the Community Eligibility Provision—a new federal option allowing high poverty schools to offer free breakfast and lunch to all students—produced significantly higher growth in low-income student participation (5 percent) than the other states combined (2.5 percent). Community eligibility will be available nationwide in the 2014-2015 school year and already has demonstrated promising potential to increase participation, especially in the School Breakfast Program.

Introduction

The School Breakfast Program supports the health and well-being of the nation's children, providing millions of low-income children with a nutritious morning meal each day. School breakfast participation is linked with increased food security, improved health outcomes, and numerous educational benefits, particularly for low-income children. In the 2012-2013 school year, access to the program continued to grow. As a result, on an average day 10.8 million of the nation's most vulnerable children started the school day ready to learn. This represented an increase of four million additional low-income children each day compared to a decade earlier.

Growth in the program built on proven strategies to increase participation in 2012-2013, such as offering breakfast in the classroom after the school day starts, and capitalized on new opportunities, such as the Community Eligibility Provision, a new option for high-poverty schools to offer school breakfast and lunch at no charge to all students. In the 2012-2013 school year, 51.9 low-income children participated in school breakfast for every 100 participating in school lunch, an increase from 50.4:100 in the previous school year. The 2011-2012 school year marked an important milestone for the program: it was the first year that more than half of low-income children who ate school lunch also ate school breakfast. The sustained growth in the following school year was the clear result of federal, state, and local efforts to expand access to the program.

Some of the states that reached the most low-income children in the 2011-2012 school year maintained high participation rates in 2012-2013 as a result of effective legislative efforts to expand programs that allow students to eat breakfast in the classroom after the start of the school day. Both the District of Columbia and New Mexico, the top two performing states this year and last, enacted such requirements for high-poverty schools. Additionally, new opportunities to offer meals at no charge to all students through the federal Community Eligibility Provision—available in seven states during the 2012-2013 school year—helped the District of Columbia, Kentucky, and West Virginia maintain high participation rates and produced gains in New York, Ohio, Illinois, and Michigan.

The nationwide availability of community eligibility in the 2014-2015 school year, the growing focus on implementing alternative breakfast models like breakfast in the classroom, and the upcoming 2015 reauthorization by Congress of child nutrition programs present significant opportunities to support continued growth in the School Breakfast Program. Despite substantial gains in recent years, half of the nation's low-income children still are missing out on the benefits of school breakfast. Advocates, school districts, and state and federal agencies must continue to build on the momentum gained in recent years to ensure that more low-income children start the school day with a healthy meal.

50th Anniversary of the War on Poverty

This year marks the 50th anniversary of President Lyndon B. Johnson's State of the Union address declaring a national "War on Poverty." The speech spurred the passage of a number of Johnson's Great Society initiatives addressing economic opportunity, education, health, and nutrition—including the Child Nutrition Act of 1966, which created the School Breakfast Program. Other legislative hallmarks of Johnson's campaign include the Food Stamp Act of 1964 and the Social Security Act of 1965, which created Medicare and Medicaid. Fifty years later, there is still work to be done to eradicate the poverty, hunger, and health disparities that President Johnson brought to the forefront of American politics. Federal nutrition programs like the School Breakfast Program are important pieces of the safety net that support struggling families and improve health and educational outcomes for low-income children.

Key National Findings

- 10.8 million low-income children participated in the School Breakfast Program on an average day in school year 2012-2013, an increase of more than 310,000 children from the previous year;
- 51.9 low-income children participated in the School Breakfast Program for every 100 low-income children who participated in the National School Lunch Program; in the prior year, the ratio was 50.4:100; and
- 89.8 percent of schools participating in the National School Lunch Program also participated in the School Breakfast Program.

In the 2012-2013 school year, growth in school breakfast participation among low-income children continued, with more children than ever starting their school day with a healthy morning meal. In the past school year, 10.8 million low-income children participated in the School Breakfast Program on an average day—an increase of 310,838 children, or 3 percent, compared to the 2011-2012 school year.

Through advocacy efforts and program and policy improvements, the School Breakfast Program continues to increase the share of children that participate. For example, in 2012-2013, for every 100 children that participate in the National School Lunch Program, 51.9 children participated in the School Breakfast Program, an increase from 50.4 per 100 in the 2011-2012 school year, and up from 42.3:100 a decade ago in the 2002-2003 school year.

How the School Breakfast Program Works

Who Operates the School Breakfast Program:

Any public school, nonprofit private school, or residential child care institution can participate in the School Breakfast Program. The program is administered at the federal level by the U.S. Department of Agriculture (USDA) and in each state through (typically) the state Department of Education or Agriculture.

Who Can Participate in the School Breakfast Program:

Any student attending a school that offers the program can eat breakfast. What a student pays depends on family income. Children from families with incomes at or below 130 percent of the federal poverty level are eligible for free school meals. Children from families with incomes between 130 and 185 percent of the federal poverty level qualify for reduced-price meals and can be charged no more than 30 cents per breakfast. Children from families with incomes above 185 percent of the federal poverty level pay charges (referred to as “paid meals”) which are set by the school, but schools receive a small federal reimbursement for such children. There are circumstances under which schools offer all children free breakfast, and they are explained later in this report.

Most children are certified for free or reduced-price meals via applications collected by the school district each year. However, children in households participating in the Supplemental Nutrition Assistance Program (SNAP), Temporary Assistance for Needy Families (TANF), and Food Distribution Program on Indian Reservations (FDPIR), as well as foster youth, migrant, homeless, or runaway youth, and Head Start participants are “categorically eligible” (automatically eligible) for free school meals and can be certified without submitting a school meal application. School districts are required to “directly certify” children in SNAP participant households for free school meals through data matching of SNAP records with school enrollment lists, and have the option of directly certifying children in TANF and FDPIR households as well. However, some categorically eligible children are missed through these processes and are still certified by submitting an application.

How the School Breakfast Program Is Funded:

The School Breakfast Program is funded by the federal government through per-meal reimbursements. The amount the school is reimbursed for each meal depends on whether a student qualifies for free, reduced-price, or paid meals. For the 2012-2013 school year, schools received \$1.55 per free breakfast, \$1.25 per reduced-price breakfast, and \$0.27 per paid breakfast. “Severe need” schools qualify for an additional 30 cents for each free or reduced-price breakfast served. Schools are considered severe need if at least 40 percent of the lunches served during the second preceding school year were free or reduced-price.

Figure 1. Student Participation in the Free and Reduced-Price School Breakfast Program

Prepared by the Food Research and Action Center (FRAC)
 Data Source: U.S. Department of Agriculture

The share of schools that offer breakfast compared to lunch slightly increased as well to 89.8 percent in the 2012-2013 school year, up from 88.9 percent in the 2011-2012 school year.¹ Over the past decade, there has been strong progress toward the goal of all schools offering breakfast and lunch. Since the 2002-2003 school year, the percentage of schools that offer lunch that also offer breakfast has increased more than 11 percentage points from 78.3 to 89.8 percent. Still, work continues to address this disparity between school lunch and breakfast programs. Advocates and state agencies should continue to encourage new and consolidated schools to offer both breakfast and lunch and to promote breakfast to schools that offer only lunch.

Finally, participation across all metrics in this report are greater than prior to the beginning of the Great Recession, the effects of which were felt beginning in the 2007-2008 school year. In particular, school breakfast participation grew at a faster rate than school lunch because of growing student need, policy changes, and the hard work of advocates, USDA, and state child nutrition agencies. For example, during the 2012-2013 school year about 30 percent more low-income children participated in school breakfast on an average day, compared to 15 percent more in school lunch, than in the 2007-2008 school year. The ratio of low-income children participating in school breakfast compared to school lunch increased by six points, from 45.9 per 100 to 51.9 per 100.

¹ Due to updated school participation numbers for New Mexico for the 2011-2012 school year, the school participation numbers are revised from FRAC's School Breakfast Scorecard SY 2011-2012, which reported a national school participation rate of 91.2 percent for SY 2011-2012. See Table 2 of this report for revised school participation numbers.

Key State Findings

- In top-ranked District of Columbia and New Mexico respectively, 70.0 and 69.8 low-income children participated in the School Breakfast Program for every 100 low-income children participating in school lunch.
- The District of Columbia had the largest increase in the percentage of low-income children participating in the School Breakfast Program, up 15.6 percent from the 2011-2012 school year.
- Delaware and Hawaii led in school participation, with 100 percent of schools participating in National School Lunch Program also offering the School Breakfast Program; the District of Columbia, South Carolina, and Texas were close behind with at least 99 percent of schools participating.

Participation by Low-income Children

In the 2012-2013 school year, 36 states increased their ratio of low-income children participating in school breakfast compared to those participating in school lunch. This is a testament to advocacy efforts that seek to expand proven strategies such as breakfast in the classroom and “grab-and-go” service models. The District of Columbia was the only jurisdiction to meet FRAC’s goal of 70 low-income children participating in school breakfast per 100 participating in school lunch, although New Mexico came very close with 69.8:100. Typically, the ratio improvement reflected an increase in the overall number of low-income children participating in school breakfast. For example, the District of Columbia had a 15.6 percent growth in participation, and West Virginia and New Jersey each had about 10 percent growth, with Colorado, Hawaii, and Maryland not far behind with 9.7, 9.1, and 8.6 percent growth, respectively.

Unfortunately, 15 states either decreased their ratio or had no change. Notably, Utah, New Hampshire, and Nebraska, the bottom three ranked states from last year’s report, continue to underperform, reaching fewer than 40 low-income children with school breakfast per 100 participating in school lunch. While the majority of states made gains in the 2012-2013 school year, some states lost ground. Wyoming, Wisconsin, and New Hampshire all had reduced average daily participation rates among low-income children of more than 3 percent.

States with the Highest and Lowest Ratios of Low-Income Children Participating in the School Breakfast Program Per 100 Participating in the National School Lunch Program

Top 10 States			Bottom 10 States		
State	Ratio	Rank	State	Ratio	Rank
District of Columbia	70.0	1	Utah	34.3	51
New Mexico	69.8	2	New Hampshire	37.3	50
West Virginia	66.9	3	Nebraska	38.9	49
South Carolina	64.6	4	Wyoming	40.0	48
Kentucky	62.9	5	Iowa	40.5	47
Vermont	61.6	6	South Dakota	41.9	46
Tennessee	61.2	7	Hawaii	42.7	45
Texas	60.8	8	Massachusetts	43.0	44
Oklahoma	59.8	9	Wisconsin	44.0	43
Mississippi	59.3	10	New York	44.1	41

Particularly successful in 2012-2013 were the states where the Community Eligibility Provision was implemented (Illinois, Kentucky, Michigan, New York, Ohio, West Virginia, and the District of Columbia). Established in the Healthy, Hunger-Free Kids Act of 2010, community eligibility allows high-poverty schools to offer nutritious meals through the National School Lunch and School Breakfast Programs to all students at no charge, without requiring school meal applications. All community eligibility states saw growth in school breakfast participation, with all of the states except Michigan experiencing greater growth than the average of the remaining 44 states. In the aggregate, average daily participation among low-income children in the seven states increased at a considerably higher rate than in non-community eligibility states. In community eligibility states, average daily School Breakfast Program participation among low-income children grew by 5 percent, compared to 2.5 percent for non-community eligibility states.

In the first three states to implement community eligibility—Illinois, Kentucky, and Michigan—schools that have utilized the provision for two school years increased lunch participation by 13 percent, and increased breakfast participation by 25 percent.² Growth in community eligibility states outpaced that of the rest of the nation in the 2011-2012 and 2012-2013 school years. The success of the provision thus far also is demonstrated by the increase in the number of schools choosing to utilize the program. In Illinois, Kentucky, and Michigan, the number of schools nearly doubled, from 665 schools in the 2011-2012 school year to 1,240 schools in the 2012-2013 school year.³

Low-Income Student Participation in the School Breakfast Program for Years 2011-2012 and 2012-2013 Among Community Eligibility Provision States vs. Non-Community Eligibility Provision States			
Community Eligibility Provision States	School Year 2011-2012	School Year 2012-2013	Percent Change in Number of F&RP Students in SBP
	Free & Reduced-Price (F&RP) SBP Students	Free & Reduced-Price (F&RP) SBP Students	
District of Columbia	26,666	30,836	15.6%
Illinois	349,929	376,272	7.5%
Kentucky	215,792	227,574	5.5%
Michigan	316,600	322,901	2.0%
New York	522,351	546,576	4.6%
Ohio	333,486	344,888	3.4%
West Virginia	76,515	83,991	9.8%
Total CEP States	1,841,339	1,933,038	5.0%
Total Non-CEP States	8,684,997	8,904,136	2.5%

School Participation

In Delaware, the District of Columbia, Hawaii, South Carolina, and Texas, more than 99 percent of schools that participated in the National School Lunch Program also participated in the School Breakfast Program. In South Carolina all schools are required by law to offer a school breakfast program, and in Texas all schools in which 10 percent or more of the students are certified for free or reduced-price meals are required to do the same. On the

² Community Eligibility: Making High-Poverty Schools Hunger Free; http://frac.org/pdf/community_eligibility_report_2013.pdf

³ Id.

other hand, in Connecticut, Illinois, Massachusetts, New Jersey, and Wisconsin—the states with the lowest percentage of schools offering school breakfast—between 20 and 25 percent of schools that offer lunch do not offer school breakfast, denying tens of thousands of low-income children in those schools the opportunity to start their day with a healthy breakfast.

Additional Children and Federal Funding

States that have not reached FRAC's goal of serving 70 low-income children school breakfast per 100 participating in school lunch not only miss out on providing children a healthy breakfast to start the day, but they also forgo considerable amounts of federal funding (see Table 4). For example, Texas, New York, California, Florida, and Illinois—the five most populous states—each would have received more than \$50 million in additional school breakfast funding had they achieved the goal of 70:100; California alone missed out on \$138.7 million. Texas, however, is the highest performing among these larger states, with a strong participation ratio of 60.8:100, which is more than 10 points greater than California (49.1:100), Florida (48.2:100), Illinois (45.6:100), and New York (44.1:100). In total, more than 1.5 million additional low-income children could be fed through the School Breakfast Program if Texas, New York, California, Florida, and Illinois met FRAC's goal of serving 70 low-income school breakfast per 100 participating in school lunch. This represents more than two-fifths of the additional low-income children nationally who would be served breakfast if all states met FRAC's goal. If all states reached 70 low-income children with school breakfast per 100 participating in school lunch, 3.8 million additional low-income children would start the day with a healthy meal through the School Breakfast Program and draw down an additional \$964.7 million dollars in federal funding.

Community Eligibility: Making High-Poverty Schools Hunger Free

The Community Eligibility Provision, a new federal option for high-poverty schools and districts to offer breakfast and lunch at no charge to all students, already has begun to demonstrate its potential to increase school breakfast (and lunch) participation and will provide a tremendous opportunity for growth in the coming years.

Initially implemented in more than 2,200 schools in 11 states, community eligibility has been phased in since the 2011-2012 school year and will be available nationwide at the beginning of the 2014-2015 school year. Illinois, Kentucky, and Michigan implemented the provision in the 2011-2012 school year; the District of Columbia, New York, Ohio, and West Virginia were added in the 2012-2013 school year; and Florida, Georgia, Maryland, and Massachusetts were added in the 2013-2014 school year.

Established in the Healthy, Hunger-Free Kids Act of 2010, community eligibility allows schools to offer breakfast and lunch free of charge to all students and to realize significant administrative savings by eliminating school meal applications. Any district, group of schools in a district, or school with 40 percent or more "identified students"—children eligible for free school meals who are already identified by other means than an individual household application—can choose to participate. The majority of identified students are directly certified through data matching because their households receive SNAP, TANF, or FDPIR, and in some states and areas, Medicaid benefits. Identified students also include children who are certified for free meals without an application because they are homeless, migrant, enrolled in Head Start, or in foster care.

Reimbursements to the school are determined by multiplying the percentage of identified students by 1.6 to determine the percentage of meals reimbursed at the federal free rate. For example, a school with 50 percent identified students would be reimbursed for 80 percent of the meals eaten at the free reimbursement rate ($50 \times 1.6 = 80$), and 20 percent at the paid rate.

Strategies to Increase Participation

Making Breakfast a Part of the School Day

Many states and school districts with high breakfast participation have achieved these gains by moving breakfast out of the cafeteria before school and scheduling it after the bell—making it much more convenient for students to participate. Implementing an alternative service model has proven to be the most successful strategy for schools to increase breakfast participation. Options include:

- **Breakfast in the Classroom:** Meals can either be delivered to the classroom or served from the cafeteria or carts in the hallway, to be eaten in the classroom at the start of the school day.
- **Grab-and-Go:** Children (particularly older students) can easily grab the components of their breakfast quickly from the cafeteria line, or from carts or kiosks in the hallway, to eat in their classroom.
- **Second Chance Breakfast:** Students are offered a second chance to eat breakfast after homeroom or first period. Many middle and high school students are not hungry first thing in the morning. Serving them breakfast after first period allows them ample time to socialize before school, while still providing them with a nutritious start early in the day.

Offering Breakfast at No Charge to All Students

Providing “universal” breakfast at no charge to all students helps remove the stigma associated with means-tested school breakfast (“breakfast is for poor kids”), and streamlines the implementation of successful alternative service models. Schools can offer universal breakfast through the following options:

- **Community Eligibility Provision:** Community eligibility schools, as described above, offer free breakfast and lunch to all students and do not collect, process, or verify school meal applications, or keep track of meals by fee category, resulting in a significant reduction in administrative work and increased participation.
- **Provision 2:** This federal option is designed to reduce paperwork and simplify the logistics of operating school meal programs. Schools using Provision 2 do not have to collect, process, or verify school meal applications or keep track of meals by fee category for at least three out of every four years. (Schools collect school meal applications and count and claim meals by fee category during year one of the multi-year cycle, called the “base year.”) Provision 2 schools have the option to serve only breakfast or lunch, or both breakfast and lunch, to all students at no charge, and use the economies of scale and significant administrative savings to offset the cost differential with federal reimbursements.
- **Nonpricing:** No fees are collected from students, while schools continue to receive reimbursements for the meals served under the three-tier federal fee categories (free, reduced-price, and paid).

Maximizing the Positive Impact of Community Eligibility on School Breakfast Participation

As states prepare for the national expansion of community eligibility in the next school year, there are a number of best practices that have emerged and important steps states should take to ensure widespread, successful school participation. In FRAC’s annual survey of state child nutrition agencies for this report, most respondents reported that they were in the process of or had already planned robust training and outreach opportunities, including community eligibility webinars (67 percent) and training sessions (80 percent). Additionally, 58 percent of states that responded have created a work group to proactively address any implementation barriers.

Advocates can play an important role in outreach to schools and other efforts to streamline implementation. Some key strategies include:

- **Promote community eligibility and provide opportunities for school districts to learn about its benefits.** Advocates can work to disseminate information to school districts and encourage school administrators, school nutrition staff, and board members to consider implementing community eligibility. Sample outreach materials, slide presentations, and other resources are available on [FRAC's Community Eligibility page](#).
- **Identify and address implications for the elimination of school meal applications.** Community eligibility schools no longer collect individual applications, which are traditionally used to determine funding for other education-related programs. Establishing state working groups that include representatives from key stakeholders—the state child nutrition agency, the state department of education, Title I funding, E-rate, accountability and assessment offices—allows states to identify and address any issues that might arise, as well as to provide clear guidance for schools interested in implementing the provision.

Engaging Stakeholders: Principals and Administrators

When implementing strategies to increase school breakfast participation, it is crucial to involve all stakeholders in the planning process in order to dispel concerns and address potential barriers. Teachers, janitorial staff, school administrators, and parents can be valuable resources to determine the most appropriate service model for each school and encourage student participation. Principals in particular play an important role in successful implementation of alternative models such as breakfast in the classroom, by providing leadership and bringing all the necessary stakeholders into the discussion.

Recognizing the influence that principals have on the school environment, including the decision to implement new breakfast service models, FRAC and the National Association of Elementary School Principals Foundation in 2013 conducted a survey of 276 principals whose schools offer breakfast in the classroom. The results, published in a joint report "[Start the School Day Ready to Learn with Breakfast in the Classroom: Principals Share What Works](#)," demonstrate an overwhelming support for the program, with 78 percent of principals responding that they would encourage other principals to consider breakfast in the classroom, and many principals reporting an increase in breakfast participation (85 percent), fewer incidents of student hunger (61 percent), fewer tardy students (40 percent), improved student attentiveness (37 percent), and an improved school (34 percent) and classroom (35 percent) environment. The survey highlighted the benefits of the breakfast in the classroom program and provided best practices for addressing any barriers that arose, and can help start a dialogue with school administrators about the health and learning benefits of increasing school breakfast participation.

Targeted Outreach and Technical Assistance: Charter Schools

In the 2012-2013 school year, more than two million children attended charter schools in 41 states, representing 4.6 percent of students nationwide, and that number is expected to grow significantly over the next decade. With the increase in the number of charter schools and charter school students, expanding school meal participation, and school breakfast in particular, is dependent on such schools first implementing the programs. The extent of charter school participation in the school nutrition programs across the country is unknown, as neither USDA nor the U.S. Department of Education collects this data. In some states, including Ohio and Texas, charter schools are subject to state laws requiring participation in school breakfast and lunch in schools. However, in other states, including California, which has the largest number of students attending charter schools, these schools have been exempt. As a result, in some states there is a significant gap in access to school meals for charter school students, despite the fact that more than half of all charter school students would be eligible for free and reduced-price school meals.

FRAC's annual survey of state child nutrition agencies for this report revealed some encouraging findings on the topic of charter schools. Of the respondents from states that allow charter schools, 73 percent of the states track the number of charter schools participating in the National School Lunch and School Breakfast Programs, and most states (54 percent) have developed targeted outreach and training specifically for charter schools. In addition, 68 percent of the states indicated that they integrate charter school content into their general outreach and training programs for all schools. As the number of children attending charter schools expands, it is important to ensure that students, especially low-income ones, are afforded access to nutritious meals at school through the federal programs.

Supporting School Breakfast Participation Through State Legislation

A number of the top performing states—and those that have produced strong growth—have built sustainable school breakfast programs statewide by enacting effective legislation to promote participation. The most recent state breakfast legislation moves beyond the traditional mandate requiring all schools or certain low-income schools to participate in school breakfast (which the majority of states enacted years ago), and focuses instead on requiring high-poverty schools to operate their school breakfast programs in ways that increase student participation. The 2012-2013 school year marked an important year for some emerging trends in state legislation:

Breakfast After the Bell: Groundbreaking legislation requiring high-poverty schools to offer universal free meals through innovative service models after the start of the school day (known as “breakfast after the bell” in some states) began in the District of Columbia in 2010 and New Mexico in 2011, and has now expanded to include Colorado. In July 2013, the Colorado state legislature passed a law requiring schools with 80 percent free and reduced-price eligible children to offer “breakfast after the bell” starting in the 2014-2015 school year. The mandate will extend to all schools with 70 percent free and reduced-price certified students in subsequent school years.

Breakfast at No Charge: This year, advocates in Texas were successful in passing a bill to require all schools with 80 percent or more free and reduced-price certified children to offer breakfast at no charge to all students. The new law builds upon the mandate already in place requiring all schools with 10 percent or more free and reduced-price certified children to offer a school breakfast program. To ensure the passage of this important piece of legislation, advocates put together a diverse coalition and were able to frame the issue as a common-sense solution for high-poverty schools to increase access to the health and educational benefits of school breakfast.

School Breakfast Continues to Get Healthier: New Standards Effective in the 2014-2015 School Year

Schools must meet all the new federal breakfast nutrition standards at the beginning of the 2014-2015 school year. The new standards have been phased in, with the following requirements going into effect at the start of the next school year:

- Fruit quantity increases to five cups per week (minimum one cup per day);
- All grains must be whole grain-rich;
- Limits on sodium content; and
- All meals selected by students must contain a fruit (or vegetable if using substitution).

Many schools already have implemented these improvements or have begun phasing them in, but some will need to incorporate all of the changes listed above next fall. Increasing school breakfast participation can help support the financial viability of the school nutrition programs—offsetting some of the increased costs of the additional fruits and whole grains by creating labor efficiencies and other savings from economies of scale.

Looking Ahead to 2015: Child Nutrition Reauthorization

The School Breakfast Program, along with other key child nutrition programs, will be up for reauthorization in 2015. The prior reauthorization, the Healthy, Hunger-Free Kids Act of 2010, incorporated several key provisions to increase access to school meals for low-income children, including:

- The Community Eligibility Provision, providing an effective option for schools to offer universal free school meals;
- Improvements to direct certification for free school meals to ensure that more low-income children are certified without an application; and
- Much-needed updates to nutrition requirements based on recommendations from the Institute of Medicine.

In 2015, Congress again will review and has the opportunity to further strengthen the laws governing the child nutrition programs. A well-conceived and adequately financed reauthorization bill, focused on the right program improvements, can increase participation in school nutrition programs, support the momentum seen across the country in the School Breakfast Program, decrease hunger, and provide the health and education benefits afforded by proper nutrition. The Obama Administration, Congress, schools, and advocates will need to work together to develop and enact a reauthorization that focuses on better meeting the needs of the low-income children who are meant to be the primary beneficiaries of the child nutrition programs.

Conclusion

As a result of the tremendous efforts by advocates, school districts, state child nutrition agencies, and USDA, growth in the School Breakfast Program has continued, reaching more low-income children than ever before in the 2012-2013 school year. With more states encouraging, and in some cases requiring, schools to implement proven strategies to increase breakfast participation—including offering free meals to all students and making breakfast a part of the school day—participation in many states has flourished. States that have implemented the Community Eligibility Provision also show the substantial potential of this new option to increase access to school breakfast for children in the nation's poorest and most vulnerable schools. Engaging all the necessary stakeholders to ensure a successful national roll-out of community eligibility in the 2014-2015 school year will be an essential step in expanding participation further. To achieve the maximum impact and ensure that all low-income children have the opportunity to start the day with a healthy breakfast, more states, school districts, and schools must continue to build on these effective strategies for growth.

Technical Notes

The data in this report are collected from the U.S. Department of Agriculture (USDA) and an annual survey of state child nutrition officials conducted by FRAC. This report does not include students or schools that participate in school meal programs in Puerto Rico, Guam, the Virgin Islands, or Department of Defense schools.

Due to rounding, totals in the tables may not add up to 100 percent.

Student Participation

Student participation data for the 2012-2013 school year and prior years are based on daily averages of the number of breakfasts and lunches served during the nine months from September through May of each year, as provided by USDA.

States report to USDA the number of meals they serve each month. These numbers may undergo later revisions by states as accounting procedures find errors or other estimates become confirmed. For consistency, all USDA data used in this report are from the states' 90-day revisions of the monthly reports. The 90-day revisions are the final required reports from the states, but states have the option to revise numbers further at any time after that point.

FRAC applies a formula (divide by 0.938 for 2011-2012 and 2012-2013) based on USDA's annual release of National Average Daily Attendance figures for Coordinated Review Effort, to adjust numbers upwards as an attendance factor to account for participation by different students in a month.

School Participation

The number of participating schools is reported by states to USDA in October of the relevant school year. The number includes not only public schools but also private schools, residential child care institutions, and other institutions that operate school meal programs. FRAC's School Breakfast Scorecard uses the October number, which is verified by FRAC with state officials.

The Cost of Low Participation Rates

For each state, FRAC calculates the average daily number of children receiving free or reduced-price breakfasts for every 100 children who, on an average day, were receiving free or reduced-price lunches during the same school year. Based on the performance of the top states, FRAC has set an attainable benchmark of every state reaching a ratio of 70 children receiving free or reduced-price breakfast for every 100 receiving free or reduced-price lunch.

FRAC then calculates the number of additional children who would be reached if each state reached this 70:100 ratio. FRAC multiplies this unserved population by the reimbursement rate for 164 school days of breakfast. While some states served breakfast for more or fewer days during the 2012-2013 school year, 164 was the national average. FRAC assumes each state's mix of free and reduced-price students would apply to any new participants, and conservatively assumes that no additional student's meal is reimbursed at the somewhat higher rate that severe need schools (those where more than 40 percent of lunches served in the second preceding school year were free or reduced-price) receive.
