

SHARE OUR STRENGTH'S NO KID HUNGRY® CAMPAIGN

No child should grow up hungry in America, but one in five children struggles with hunger.

Share Our Strength's No Kid Hungry® campaign is ending childhood hunger in America by ensuring all children get the healthy food they need, every day.

The No Kid Hungry campaign connects kids in need to effective nutrition programs like school breakfast and summer meals and teaches low-income families to cook healthy, affordable meals through Cooking Matters.

This work is accomplished through the No Kid Hungry network, made up of private citizens, public officials, nonprofits, business leaders and others providing innovative hunger solutions in their communities. Join us at NoKidHungry.org.

"I believe this tool will allow schools to see how each of the child nutrition programs can be complimentary and financially efficient in providing students with the adequate quality and quantity of nutritious food essential to learning."

— Rose Walker,
Partnership for a
Hunger-Free Oregon

NO KID HUNGRY SCHOOL CALCULATOR

One in five kids in America struggles with hunger and one in every two educators see ending childhood hunger as a priority.

For schools, every child counts and so does every dollar. Programs like school breakfast, afterschool meals and summer meals help kids get the food they need to succeed, but the decision to run or expand these programs often comes down to dollars and cents. In fact, schools in high-need areas often find that expanding school meal participation allows them not just to feed more students, but to help their bottom line too.

That's why we developed the No Kid Hungry School Calculator, in collaboration with Deloitte Consulting LLP. This first-of-its-kind Calculator shows what it really means for a school or school district to expand or modify meals programs. The Calculator gives every school decision maker in America the chance to see how their bottom line could be affected by these programs – and the results can be surprising.

- The calculator is easy to use. School decision makers can 1) plug in demographic information, 2) explore different ways to expand school meals programs like moving breakfast to the classroom or serving afterschool meals, and 3) come out with hard data about costs, number of students served and federal reimbursement dollars.
- In about 30 minutes school decision makers can see how many more kids they could be feeding and how much more federal dollars could be coming into their school. That's 30 minutes well spent considering that three in four K-8 public school teachers and principals see hunger in their classrooms.
- The Calculator has special features including the ability to analyze one, two or all three meal programs. You can also add up the totals for multiple schools in a district to get a wider view of the potential impact.

Help more kids in school get the food they need to succeed.
